

Colorlinx

EXPERTS

Colorlinx® Australia is a major manufacturer and supplier of colour oxides located in Melbourne.

CUSTOMISED

Create the specific colour that you desire with our customised blending offer.

FULL SERVICE

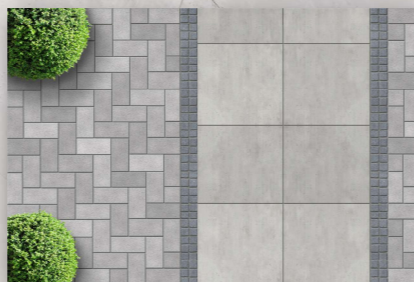

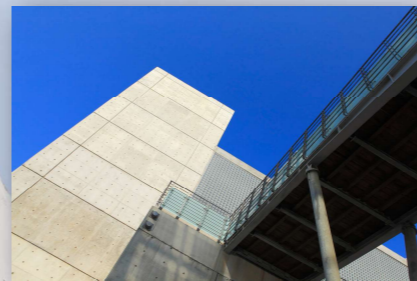

Colour matching, fast delivery, affordable prices, various packaging options.

APPLICATION

All Colorlinx® oxides are packed in a paper bag with a water soluble inner bladder. This technology ensures that there is no debris in the finished product, and is highly recommended for use in sensitive projects such as exposed and polished concrete. The inner bladder is simply thrown into the mix ensuring a flawless dosage and a clean application.

Colorlinx® oxides can be mixed in both grey and off-white cement, at a customised dose rate to achieve the tone and colour required for your projects.

At Colorlinx®, our staff are always committed to provide you with the best advice to suit your decorative concrete needs.

Colours in Grey Cement

Colours in Off-White Cement

A 12.5kg bag of colour oxide will achieve an **4%** dose rate, based on 30 MPa cubic metre of concrete (300kg of cementitious material). This produces a smooth shade finish. Whereas, 25kg of colour oxide will achieve a **8%** dose rate, based on 30 MPa cubic metre of concrete. This will give a richer and vibrant perception.

The colour swabs in these charts have been achieved by printed means only. However, variations can arise due to water dosage, mixing time, weather changes or concrete binding materials. All information has been provided in good faith and to the best knowledge of Colorlinx®. No warranties or inducements will be given, and Colorlinx® does not assume any legal responsibilities.
